## Web Software Developer

VirPack is a leading developer and innovator of advanced, web-based document management, workflow automation and electronic delivery software with an established presence in the residential mortgage banking industry. The platform is offered as a SaaS using Azure as the hosting platform. We are looking to hire a full-time software developer who will participate in the design, coding, testing, debugging, implementation and support of the company's core and supporting applications.

### Job Description

This Web Software Developer position will be responsible for the development, operational feasibility, and deployment of the enterprise's overall systems. This role designs, codes, tests, and debugs of complex application programming problems, taking computer equipment capacity, limitations, operating time, and form of desired results into consideration.

Modifies organization's applications systems by programming, encoding, testing, and debugging programs. Ensures that programs can be integrated in the applications systems. Assists with solving problems with existing applications systems.

Analyzes and integrates vendor and client technologies within existing application frameworks to improve design and application functionality. Responsible for developing, documenting, and maintaining external interfaces and APIs. Works on most phases of applications programming activities.

Resourceful in familiar situations. Self-starter, voluntarily solves non-routine job problems when necessary. Shows a keen insight into people. Constantly offers and eager to assist others. Effectively manages deadlines and commitments.

Occasionally directed in several aspects of work. Works at a steady pace meeting requirements and standards for accuracy. Excellent communicator, effectively expresses thoughts in verbal and written format with coworkers, management, and clients.

## **Duties and Responsibilities**

- Analyzes and integrates new products or technologies with existing applications to improve the design and application functionality. Documents, and maintains applications. Works on most phases of applications programming activities.
- Occasionally directed in several aspects of work, works at a steady pace meeting requirements and standards for accuracy. Cooperative, willing to accept suggestions and direction. Resourceful in familiar situations. Self-starter. Communicates effectively with coworkers and management.
- Researches technical problems and suggests improvements for applications.
- Codes, tests, debugs, troubleshoots and solves software issues. Duties and Responsibilities
- Researches, identifies, selects, and tests technology products required for solution delivery. Establishes, implements, and documents the technology integration or migration strategies.
- Leads all phases of applications programming and provides a leadership role for the development team. Works autonomously with little supervision; capable of managing multiple tasks and responsibilities concurrently.
- Highest level of quality, exceptional producer, consistently meets deadlines. Goes out of way to accept responsibility, highly resourceful and constructive in new situations. Highly motivated and trustworthy. Can be counted on to go beyond limits of duties when needed.
- Excellent communicator, effectively expresses thoughts in verbal and written format with coworkers, management, and clients.
